PROJECTS

AI Image Generation | *Build Your Imagination*   October 2023

- My website leverages state-of-the-art AI technology to autonomously generate tailored images according to user input and preferences. This streamlined process eliminates the necessity for manual image creation, providing users with a swift and efficient means to acquire visually captivating content.
- **Technologies Used: HTML, CSS, JavaScript**

Weather web application | September 2023

- It allows users to check current weather conditions in different places quickly and easily. It provides up-to-date information like temperature, humidity, and wind speed.
- **Technologies Used: HTML, CSS, JavaScript**

E-Commerce Website | *Photo Duniya*   December 2021

- In it we can sell our photos and buy photos. Moreover, we build our connections with other photographers, creators, or clients.
- **Technologies Used: HTML, CSS**

Personal Diary Management System | *Photo Duniya*   January 2023

- Developed a Personal Diary Management System using C++ to provide users with a secure platform to record daily thoughts, events, and tasks. The system allows for easy navigation, search, and editing of entries.
- **Technologies Used: C++**

SKILLS

Languages: C, C++, Python
Course work: Data Structure and Algorithim
Development: Markup Language, CSS, JaveScript, BootStrap, JQuery
